Good afternoon,

The Cayuse is currently sampling B479 (RM 26), attempt #4 - Alt location area 52. The crew probed the area in 6 different locations and all material consisted of very hard sand with cobbles.

A previous sample was collected at B480 that had very little fines (approximately 15ft away from current sampling location). The Pre-RD group is discussing the idea of abandoning the sample site B479 and moving on to B478, as the target site is comprised of shallow hard sand, and rip rap with cobbles.

Jonni
